INTERNATIONAL CODE OF OENOLOGICAL PRACTICES

Treatment with citric acid

II.3.3.8 Treatment with citric acid

Classification:

• Citric acid, monohydrate: additive

Definition:

Addition of citric acid to wine.

Objective:

To bind ferric ions in a soluble complex anion and thus to lessen the tendency to form iron hazes.

Prescriptions:

- a) The maximum citric acid content of the wine at the point of consumption shall be $1 \, g/l$.
- b) The citric acid used shall comply with the prescriptions of the *International Oenological Codex*.

Recommendation of the OIV:

Admitted
