# INTERNATIONAL OENOLOGICAL CODEX Cellulose

# **COEI-1-CELLUL Cellulose**

 $C_{12}H_{20}O_{10})n$ 

# INS N°: 460

## 1. Object, origin and field of application

Cellulose is obtained from mechanical processing and purification from an alphacellulose, which comes directly from vegetable fibres. Its molecular weight is  $1.5.\,10^5$  Dalton. Cellulose fibre is used for its absorbency traits, mainly for the filtration of wine.

# 2. Labelling

The concentration of the product and whether it was mixed, must be indicated on the label in addition to the change.

#### 3. Characteristics

Cellulose is a white odourless, flavourless, fibre. It is insoluble in water.

## 4. Test trials

- 4.1. pH
  - Mix 5g of cellulose in 40 ml of water free of carbon dioxide, for 20 minutes.
  - Centrifuge.
  - The pH of the supernatant will be between 5.0 and 7.5.
- 4.2. Humidity and volatile matter
  - Put 5 g of cellulose in an incubator at 105°C for 3 hours.
  - Mass loss must not exceed 8%.

# All of the maximum limits set below refer to the dried product.

## 4.3. Starch

• Add 90 ml of water (R) to 10 g of microcrystalline cellulose and boil for 5 minutes.

# Cellulose

- Filter when hot. Cool and add 0.1 ml of 0.05 Miodine to the filtrate.
- A blue colour should not appear.

#### 4.4. Ashes

- Incinerate at 600 ± 25°C the residue obtained according to point 4.2, for 4 hours.
- The weight of the ashes should not exceed 2%.

## 4.5. Preparation of the test solution

- After weighing, dissolve ashes in 2 ml of concentrated hydrochloric acid (R) and 10 ml of water (R).
- Heat in order to dissolve and fill the water up to 50 ml. (R).

#### 4.6. Iron

Determine iron using an atomic absorption spectrophotometer (following the method described in Chapter II on the test solution (4.5).

Iron content must be less than 100 mg/kg.

### 4.7. Lead

Measure out lead following the method described in Chapter II on the test solution (4.5). Lead content must be less than 5 mg/kg.

# 4.8. Mercury

Measure out mercury following the method described in Chapter II on the test solution (4.5).

Mercury content must be less than 1 mg/kg.

## 4.9. Cadmium

Measure out cadmium as described in Chapter II on the test solution (4.5).

Cadmium content must be less than 1 mg/kg.

#### 4.10. Arsenic

Measure out arsenic following the method described in Chapter II on the test solution (4.5).

Arsenic content must be less than 2 mg/kg.

#### 4.11. Calcium

Determine calcium using an atomic absorption spectrophotometer (see method described in Chapter II on the test solution (4.5). Calcium content must be less than

COEI-1-CELLUL 2

# INTERNATIONAL OENOLOGICAL CODEX Cellulose

500 mg/kg.

4.12. Water soluble substances

Evaporate the aliquot part of the supernatant obtained when measuring the pH level at point 4.1, in an incubator at 105°C for 3 hours. The soluble substance content should not exceed 0.25%.

# 5. Storing conditions

Cellulose should be kept in a well-ventilated place in sealed packages away from volatile substances susceptible of being adsorbed.
