## INTERNATIONAL CODE OF OENOLOGICAL PRACTICES

# Alcoholic fermentation

# **II.2.3 Alcoholic fermentation**

#### **Definition:**

Transformation of grape sugars into ethanol, carbon dioxide and secondary products.

## Objective:

Production of wine.

## **Prescriptions:**

- a) Fermentation can take place:
  - Spontaneously by means of yeasts naturally present on the skins of the grapes, in the musts and in cellars;
  - By inoculation of must or of crushed grapes with selected yeasts, before or during the fermentation (*see II.2.3.1 'Inoculation with yeasts'*).
- b) The progress of the alcoholic fermentation can be influenced:
  - By addition of activator substances (see Activation of alcoholic fermentationII.2.3.2 and II.2.3.4 'Treatment with yeast ghosts'):
  - By aeration of the crushed grapes or of the fermenting must (see Aeration II.2.3.5);
  - By control of the fermentation temperature as a function of the type of wine desired (see II.2.3.6 'Interruption of alcoholic fermentation by physical processes');
  - By all other acceptable interventions aiming to favour alcoholic fermentation, to restrain it or to stop it.
