## INTERNATIONAL CODE OF OENOLOGICAL PRACTICES

# Carbonic maceration

# **II.1.7 Carbonic maceration**

#### Definition:

Process in which whole grapes are placed for a few days in a closed tank whose atmosphere comprises carbon dioxide. This gas results either from an external source, or from the respiration of grapes and the fermentation of a part of the crushed berries, or from both.

## Objective:

Production of red wine or rosé which is more supple, less acidic, fresher and with a better expression of varietal aromas.

### **Prescriptions:**

- a) A device for venting the gas formed should be provided so that the internal pressure does not exceed atmospheric pressure.
- b) The grapes, once removed from the tank, are crushed and pressed, and the separated must is fermented in the absence of solid matter.
