INTERNATIONAL CODE OF OENOLOGICAL PRACTICES Treatment with **D**-glucanases

II.3.5.7 Treatment with **D**-glucanases

Classification:

• Beta-glucanase $(\beta 1-3, \beta 1-6)\beta$: processing aid

Definition :

Addition to wine of an enzyme preparation containing activities catalysing the degradation of beta-glucans produced in the grape berry by the fungus Botrytis cinerea (noble rot, grey rot).

Enzyme activities involved in the degradation of \Box -glucans of botrytis cinerea are \Box -glucanases type \Box -1,3 and 1,6. The \Box -glucanases including \Box -1.3-glucanases are also able to degrade \Box -glucans released by saccharomyces type yeasts during alcoholic fermentation and during wine aging on lees.

Objective :

To improve the clarification and filterability of wines.

Prescription :

The glucanase preparation shall comply with the prescriptions of the International Oenological Codex .

Recommendation of OIV:

Admitted
