## COMPENDIUM OF INTERNATIONAL METHODS OF WINE AND MUST ANALYSIS Hydroxymethylfurfural (HPLC) (Type-IV)

### **OIV-MA-AS315-05B Hydroxymethylfurfural (HMF)**

Type IV method

#### 1. Principle of the method

Separation through a column by reversed-phase chromatography and determination at 280 nm.

Procedures described below are given as examples.

#### 2. High-performance liquid chromatography

- 1. Apparatus
  - 1. High-performance liquid chromatograph equipped with:
  - a loop injector, 5 or 10 μL
  - spectrophotometric detector allowing measurement at 280 nm
  - column of octadecyl-bonded silica (e.g.Bondapak C<sub>18</sub>-Corasil, Waters Ass)
  - a recorder, preferably an integrator
  - Flow rate of mobile phase: 1.5 mL/minute
  - Membrane filtration system with a pore diameter of 0.45 μm.
- 2.2. Reagents
- 2.2.1. Double distilled water
- 2.2.2. Methanol, distilled or HPLC quality
- 2.2.3. Acetic acid ( $\square_{20}$ = 1.05 g/mL)
- 2.2.4. Mobile phase: water + methanol + acetic acid previously filtered through a 0.45 µm membrane filter, (40 mL + 9 mL + 1 mL)

The mobile phase must be prepared daily and degassed before using.

2.2.5. Hydroxymethylfurfural reference solution, 25 mg/L (m/v)

Into a 100 mL volumetric flask, place 25 mg of hydroxymethylfurfural accurately weighed, and bring to volume with methanol. Dilute this solution 1/10 with methanol and filter through a  $0.45~\mu m$  membrane filter.

If the solution is kept refrigerated in a hermetically sealed brown glass bottle it should

OIV-MA-AS315-05B

# COMPENDIUM OF INTERNATIONAL METHODS OF WINE AND MUST ANALYSIS Hydroxymethylfurfural (HPLC) (Type-IV)

keep for two to three months.

#### 2.3. Procedure

Inject 5 (or 10)  $\mu$ L of the sample prepared as described above and 5 (or 10)  $\mu$ L of hydroxymethylfurfural reference solution into the chromatograph. Record the chromatogram.

The retention time of hydroxymethylfurfural is about six to seven minutes.

#### 2.4. Expression of the Results

The hydroxymethylfurfural concentration is expressed in milligrams per liter (mg/L) to one decimal point.
