

### **I.3.2 Complementary definitions relating to sugar content<sup>[1]</sup>**

The wine is said to be :

- Dry, when the wine contains a maximum of either 4 g/l sugar or 9 g/l when the level of total acidity (expressed in grams of tartaric acid per litre) is no more than 2 g/l less than the sugar content.
- Medium dry, when the sugar content of the wine is higher than the sugar content indicated under the first bullet point and does not exceeds
  - 12 g/l or
  - 18 g/l, when the difference between the sugar content and the level of total acidity expressed in g/l of tartaric acid does not exceed 10g/l when the sugar content of the wine is more than that specified in the first bullet point, up to a maximum of either 12 g/l or 18 g/l when the content in total acidity is fixed according to the first bullet point above.
- Semi-sweet, when the sugar content of the wine is more than that specified in the second bullet point, up to a maximum of 45 g/l.
- Sweet, when the wine has a minimum sugar content of 45 g/l

---

<sup>[1]</sup> sugar content is determined by the “glucose + fructose” method of analysis described in the International Compendium of Methods of Analysis
