

II.3.1.2.1 Physical de-acidification

Definition :

Reduction of the titratable acidity by use of physical procedures.

Objective :

To produce wines :

- a) *See 3.1.2 'De-acidification'*
- b) Stable with regard to precipitation of excess potassium bitartrate and calcium tartrate.

Prescriptions :

The precipitation of potassium bitartrate and calcium tartrate occurs:

- a) Either spontaneously during storage of the wine at low temperature, or
- b) As the result of chilling the wine (see Cold Treatment) [AF1]

Recommendation of the OIV:

Admitted
